

Report
Of
Generative AI Virtual Internship

Submitted
To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Name: DHRUV SETH

Roll No: 2410031362

Batch: **2026-27**

CANDIDATE'S DECLARATION

I, **Dhruv Seth**, do hereby declare that the internship report titled “**Generative AI Virtual Internship**” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature

Student Name: Dhruv Seth

Roll No: 2410031362

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to thank **EduSkills Foundation**, the **All India Council for Technical Education (AICTE)**, and **Google Cloud** for organizing and supporting the Generative AI Virtual Internship, and for providing the learning platform and resources that made this internship possible. I also extend my sincere thanks to the faculty of the School of Computer Science and Engineering, IILM University, Greater Noida, for their continuous guidance and support.

I express my gratitude to my parents for their blessings.

Certificate of Virtual Internship

This is to certify that

Dhruv Seth

IILM University, Greater Noida

has successfully completed the 8-weeks

Generative - AI Virtual Internship

During April - June 2026

May this Internship learning propel you toward a bright and successful career.

4. PROJECT DESCRIPTION

4.1 Introduction

Generative Artificial Intelligence (Generative AI) is a branch of artificial intelligence concerned with models that can create new content — text, images, code, audio and other media — by learning the underlying patterns and structures present in large volumes of training data. In recent years, the emergence of Large Language Models (LLMs) and foundation models has made Generative AI one of the most rapidly evolving and industry-relevant areas within Computer Science and Artificial Intelligence & Machine Learning (AI & ML).

As part of the B.Tech CSE (specialization in Artificial Intelligence and Machine Learning) curriculum at IILM University, Greater Noida, the candidate, **Dhruv Seth**, undertook an 8-week **Generative AI Virtual Internship** during **April–June 2026**, conducted virtually through the **EduSkills** platform under the AICTE National Internship Portal / NEAT (National Educational Alliance for Technology) initiative of the Ministry of Education, Government of India, and supported by **Google Cloud**. The internship was successfully completed with an overall grade of “O” (Outstanding), as recorded on the Certificate of Virtual Internship (Certificate ID: 4cde966915649b22e88f).

This report documents the internship undertaken, the organizational context in which it was delivered, the learning objectives and scope of the program, the technologies and tools associated with it, the overall learning workflow followed, and the outcomes achieved by the candidate.

4.2 Organization Profile

EduSkills Foundation is a not-for-profit organization that partners with the All India Council for Technical Education (AICTE) to deliver structured virtual internship programs to engineering and technology students across India, under AICTE’s National Educational Alliance for Technology (NEAT) initiative and the National Internship Portal. EduSkills collaborates with leading technology companies — including Google Cloud — to design curricula that combine self-paced online learning with hands-on, lab-based practice, enabling students to gain industry-aligned skills without requiring physical placement at a host organization.

Google Cloud, the supporting organization for this internship, is the cloud computing and enterprise technology division of Google, offering infrastructure, platform, and AI/ML services. Google Cloud supported this internship track by providing access to its learning platform, *Google Cloud Skills Boost*, through which structured, self-paced Generative AI courses, quizzes, and hands-on labs are typically delivered to interns enrolled through the AICTE–EduSkills programme.

4.3 Problem Statement

There exists a well-documented gap between the theoretical, curriculum-based exposure that engineering students receive on emerging technologies and the practical, applied skill sets demanded by the industry — particularly in fast-moving fields such as Generative AI, Large Language Models, and responsible AI development. Students pursuing a B.Tech in CSE (AI & ML) require structured avenues to gain hands-on, industry-relevant exposure to Generative AI concepts and tools, validated through recognized assessment and certification, in order to remain competitive in the evolving AI/ML job market.

The Generative AI Virtual Internship offered through AICTE–EduSkills, supported by Google Cloud, was undertaken to address this gap by providing a structured, verifiable, and industry-supported learning pathway in Generative AI.

4.4 Project Objectives

- To build a foundational and applied understanding of Generative AI concepts, including how large language models and generative models are trained and used.
- To gain exposure to Google Cloud’s Generative AI ecosystem and associated learning/lab environment through the Google Cloud Skills Boost platform.
- To understand key applied concepts such as prompt engineering and the principles of responsible/ethical AI development.
- To complete the structured assessments and practical activities prescribed by the internship curriculum within the 8-week program duration.
- To earn an industry- and AICTE-recognized certification validating the skills acquired during the internship.

4.5 Scope of the Project

The scope of this internship was limited to a self-paced, virtual (remote) learning format spanning 8 weeks (April–June 2026), covering conceptual and applied aspects of Generative AI as structured by the EduSkills–Google Cloud curriculum. The internship involved individual learning and assessment; it did not involve on-site placement, real-time client engagement, or production-scale software deployment. The scope was therefore oriented toward skill acquisition, guided practical activity, and certification, rather than the delivery of a commercial or client-facing product.

4.6 Technologies and Tools Used

Based on the nature of the internship track (Generative AI, supported by Google Cloud) and its delivery through the Google Cloud Skills Boost platform, the program is generally structured around the following technology areas:

- Google Cloud Platform (GCP) — the underlying cloud infrastructure and console environment used for guided labs.
- Google Cloud Skills Boost — the learning management and hands-on lab delivery platform used for course modules, quizzes and lab-based exercises.
- Generative AI and Large Language Model (LLM) concepts, including prompt engineering and responsible AI practices, as covered in the course curriculum.

Completed Google Cloud Skills Boost Courses:

- Introduction to Generative AI
- Introduction to Large Language Models
- Attention Mechanism
- Encoder-Decoder Architecture
- Transformer Models and BERT Model
- Introduction to Image Generation
- Gen AI: Unlock Foundational Concepts
- Gen AI: Navigate the Landscape
- Gen AI Apps: Transform Your Work
- Gen AI Agents: Transform Your Organization

4.7 System Architecture

As this was primarily a virtual, curriculum-based learning internship rather than a software development assignment, no client-deployed software architecture was built. Instead, Figure 4.1 below presents the learning/application workflow architecture followed during the internship, from enrolment through to certification.

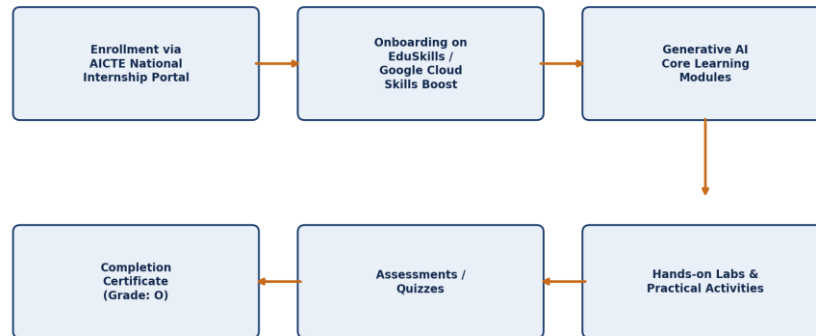

Figure 4.1: System / Learning-Application Workflow of the Generative AI Virtual Internship

4.8 Methodology

The internship followed a self-paced, module-based learning methodology, typical of AICTE–EduSkills virtual internships delivered on the Google Cloud Skills Boost platform:

- Registration and enrolment through the AICTE National Internship Portal and onboarding onto the EduSkills / Google Cloud Skills Boost learning environment.
- Completion of structured, self-paced Generative AI learning modules (video-based and reading content) covering core concepts.
- Hands-on practical activities/labs conducted within the Google Cloud sandbox/lab environment to reinforce theoretical concepts.
- Periodic assessments/quizzes associated with each learning module, used to evaluate comprehension and practical competence.

- Final evaluation and grading, culminating in the issuance of a Certificate of Virtual Internship upon successful completion.

4.9 Expected Outcomes

The following outcomes are supported directly by the Certificate of Virtual Internship issued to the candidate:

- Successful completion of the 8-week Generative AI Virtual Internship (April–June 2026), as certified by EduSkills, AICTE’s NEAT Cell, and Google Cloud.
- An overall performance grade of “O” (Outstanding, 90–100 as per the certificate’s grading scale), indicating a strong demonstrated understanding of the Generative AI curriculum covered.
- Applied, foundational competence in Generative AI concepts relevant to the candidate’s B.Tech CSE (AI & ML) specialization, complementing academic coursework with an industry-recognized credential.

4.10 Certificates of Completion and Other Communication Mail Proof

The Certificate of Virtual Internship issued jointly by the Ministry of Education, AICTE (NEAT Cell), and EduSkills, and supported by Google Cloud, is reproduced in full under Section 3 (Internship Completion Certificate) of this report, and is reproduced again below for reference.
