

IILM UNIVERSITY, GREATER NOIDA

School of Computer Science and Engineering

Summer Internship Presentation

Generative AI Virtual Internship

Student Name:

Dhruv Seth

Roll / Enrollment Number:

2410031362

Program & Semester:

B.Tech CSE (AI & ML) | 5th Semester

Organization:

EduSkills (AICTE NEAT Cell) – Supported by Google Cloud

Internship Overview

TRACK

**Generative AI Virtual
Internship**

DURATION

8 Weeks (April – June 2026)

FACILITATOR

**EduSkills Foundation, AICTE
NEAT Cell**

SUPPORTED BY

Google Cloud

MODE

Fully Virtual / Self-Paced

GRADE AWARDED

**“Outstanding” (Grade O, 90–
100)**

Organization Profile

EduSkills Foundation

A not-for-profit organization partnering with AICTE to deliver structured virtual internships to engineering and technology students across India, under AICTE's National Educational Alliance for Technology (NEAT) initiative and the National Internship Portal.

Coordinating Authorities

- Ministry of Education, Government of India
- AICTE – NEAT Cell
- National Internship Portal

Google Cloud (Supporting Organization)

The cloud computing and enterprise technology division of Google, offering infrastructure, platform, and AI/ML services. Google Cloud supported this internship track by providing access to its learning platform.

Google Cloud Skills Boost

The learning management and hands-on lab delivery platform used for course modules, quizzes, and lab-based exercises throughout the internship.

Introduction to Generative AI

Generative Artificial Intelligence (Generative AI) is a branch of AI concerned with models that create new content — text, images, code, and audio — by learning patterns from large volumes of training data. Large Language Models (LLMs) and foundation models have made it one of the fastest-growing areas of Computer Science and AI & ML.

01

Large Language Models

Models trained on massive text corpora to understand and generate human-like language.

02

Prompt Engineering

Crafting effective inputs to reliably guide a generative model toward a desired output.

03

Responsible AI

Practices ensuring generative systems are used safely, fairly, and transparently.

Internship Objectives

- 1 Build a foundational and applied understanding of Generative AI concepts, including how LLMs and generative models are trained and used.
- 2 Gain exposure to Google Cloud's Generative AI ecosystem via the Google Cloud Skills Boost platform.
- 3 Understand applied concepts such as prompt engineering and responsible/ethical AI development.
- 4 Complete all structured assessments and practical activities within the 8-week program duration.
- 5 Earn an industry- and AICTE-recognized certification validating the skills acquired.

Problem Statement & Scope

Problem Statement

A well-documented gap exists between the theoretical, curriculum-based exposure engineering students receive and the practical, applied skill sets demanded by industry — particularly in fast-moving fields such as Generative AI.

Students pursuing a B.Tech in CSE (AI & ML) require structured, verifiable avenues to gain hands-on, industry-relevant exposure to Generative AI, validated through recognized assessment and certification.

Scope of the Internship

- Self-paced, fully virtual (remote) format spanning 8 weeks
- Covers conceptual + applied aspects of Generative AI
- Individual learning, labs, and assessment
- Excludes on-site placement or real-time client engagement
- Excludes production-scale software deployment

Technologies and Tools Used

Based on the nature of this internship track and its delivery through Google Cloud Skills Boost, the program is generally structured around the following technology areas:

Google Cloud Platform

Underlying cloud infrastructure and console environment used for guided labs.

Google Cloud Skills Boost

Learning management and hands-on lab delivery platform for modules, quizzes, and exercises.

Generative AI / LLM Concepts

Core concepts including prompt engineering and responsible AI practices.

GOOGLE CLOUD SKILLS BOOST — CORE COURSES COMPLETED

Introduction to Generative AI • Introduction to Large Language Models • Introduction to Responsible AI • Attention Mechanism • Encoder-Decoder Architecture • Transformer Models and BERT Model • Introduction to Image Generation • Gen AI: Unlock Foundational Concepts • Gen AI: Navigate the Landscape • Gen AI Apps: Transform Your Work • Gen AI Agents: Transform Your Organization

System Architecture / Learning Workflow

As this was primarily a virtual, curriculum-based learning internship rather than a software development assignment, the diagram below presents the learning/application workflow followed — from enrollment through to certification.

Methodology

Learning Outcomes

- Successful completion of the 8-week Generative AI Virtual Internship (April–June 2026), certified by EduSkills, AICTE’s NEAT Cell, and Google Cloud.
- An overall performance grade of “O” (Outstanding), indicating a strong demonstrated understanding of the Generative AI curriculum covered.
- Applied, foundational competence in Generative AI concepts — complementing academic coursework with an industry-recognized credential.
- Strengthened practical ability to critically evaluate AI-generated outputs for accuracy, bias, and reliability, and to apply prompt-engineering techniques effectively.

Certificate of Completion

Certificate ID: 4cde966915649b22e88f | Student ID: STU6830bac9968091748024009

Conclusion

The Generative AI Virtual Internship, undertaken through EduSkills under the AICTE NEAT Cell and supported by Google Cloud, provided a structured, verifiable pathway to build foundational and applied Generative AI skills over an 8-week period. The internship was completed with an overall grade of “Outstanding,” reflecting a strong grasp of the curriculum covered and complementing the candidate’s B.Tech CSE (AI & ML) coursework with an industry-recognized credential.

Key Takeaways

- Strengthened conceptual foundation in Generative AI and LLMs
- Practical exposure to the Google Cloud learning ecosystem
- Industry- and AICTE-recognized certification (Grade: O)

Thank You
